

USAGE CHART

Choose the proper liner.

To find the proper liner for your hauling application, locate the material you haul most on the left side. Locate how many loads are hauled daily, across the top. Follow the two lines to where they cross. The intersection of these two lines are the recommended liner you need for your special hauling needs. Remember to use this chart as a guide only. Contact your local DiamondSlide representative or call DiamondSlide direct for more information on which liner you need to use. Remember, if you are going to haul ANY asphalt you must use a 1/2" H.D. liner, 10ft wide. Choosing the proper liner is very important. With the proper liner, you will receive years of hauling benefits.
