Aluminum Automatic Tarping System

Precision Manufactured, Professional, Highest Quality

Is Your Aluminum Bullet as strong as steel?

Against a blow from a front-end loader, your aluminum Bullet is as durable as any steel arm counterpart. What makes it better than steel is that your Bullet will never rust, is 40% lighter than steel and looks like you paid a fortune for it.

People pay a lot of money to get a shiny finish on their exhaust stacks, gas tank, mirrors, and rims. Now your tarp system can have a professional finish but without the high price. The price for a new Bullet is about the same as steel, making Bullet the best value on the market for tarping systems...We guarantee it.

**WILL NEVER RUST.....
40% LIGHTER THAN STEEL.....**

A manual reset circuit breaker is mounted next to the switch in your cab to defend your motor against over-torque. As an added bonus, our motor warranty secures your investment for 3 years.

A bent tarp roller bar puts a lot of stress on your motor and can even burn it out. The Bullet has an extruded aluminum roller bar made with a sturdy cross section design that virtually eliminates bending.

The wind deflector is made from polished diamond plate aluminum to match your truck's existing accessories.

The bullet-shaped pivot arms are built to last and have a sharp, professional finish. Shiny corner castings join your aluminum arms together to give your truck an extra shine.

Straight arms don't stay straight for long, so we designed the Bullet pivot arms to include a 30° bend option that moves the arms out of the path of a front end loader.

The Bullet's 8 individual coil springs give you the same benefit as a 10 wheel truck; you always have a spare in place to keep you on the road till the job is done. Each spring has a 5-year life expectancy, reducing your overall cost and frequency of maintenance.

.....LOOKS GREAT WITH IT'S PROFESSIONAL FINISH.....
